
(a)
$A_f = 10$
off
on
$\langle r_E \rangle_\phi / \bar{r}_E$
Δf phase (cycles)
E neuron #
E rate (Hz)
time in measurement window (ms)
(b)
$A_f = 35$
off
on
$\langle r_E \rangle_\phi / \bar{r}_E$
Δf phase (cycles)
E neuron #
E rate (Hz)
time in measurement window (ms)
(c)
two-tone TI
equal-RMS carrier
line amplitude / mean rate
frequency (Hz)
(d)
two-tone TI
equal-RMS carrier
line amplitude / mean rate
frequency (Hz)
